

## Week 1 Lab: Writing your First program using Visual Studio Code

### Dr.Nadeem Qazi

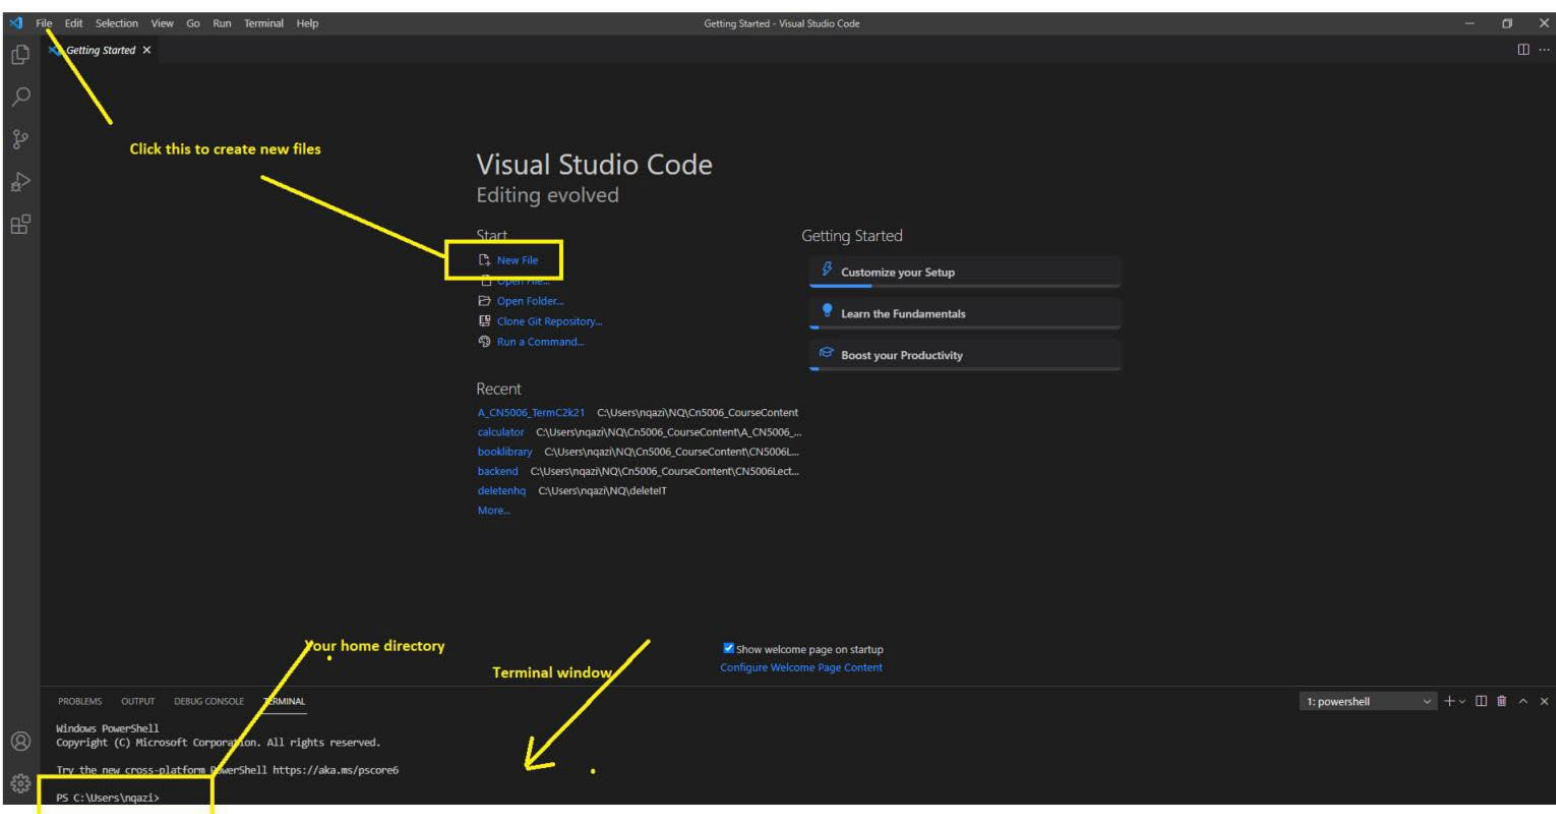

---

This tutorial will guide you in writing your first JavaScript program. Be sure to also watch the video to learn how to use Visual Studio Code for coding: **How to use Visual Studio Code**.

- Step 1 Make sure you have installed Visual Studio Code and NodeJS.
- Step 2: Open Visual Studio code by typing V as shown in the figure below .

Once the visual studio code is started you will see the following window :

Step 3 check if node JS is installed. In the terminal window, on the prompt write the following line

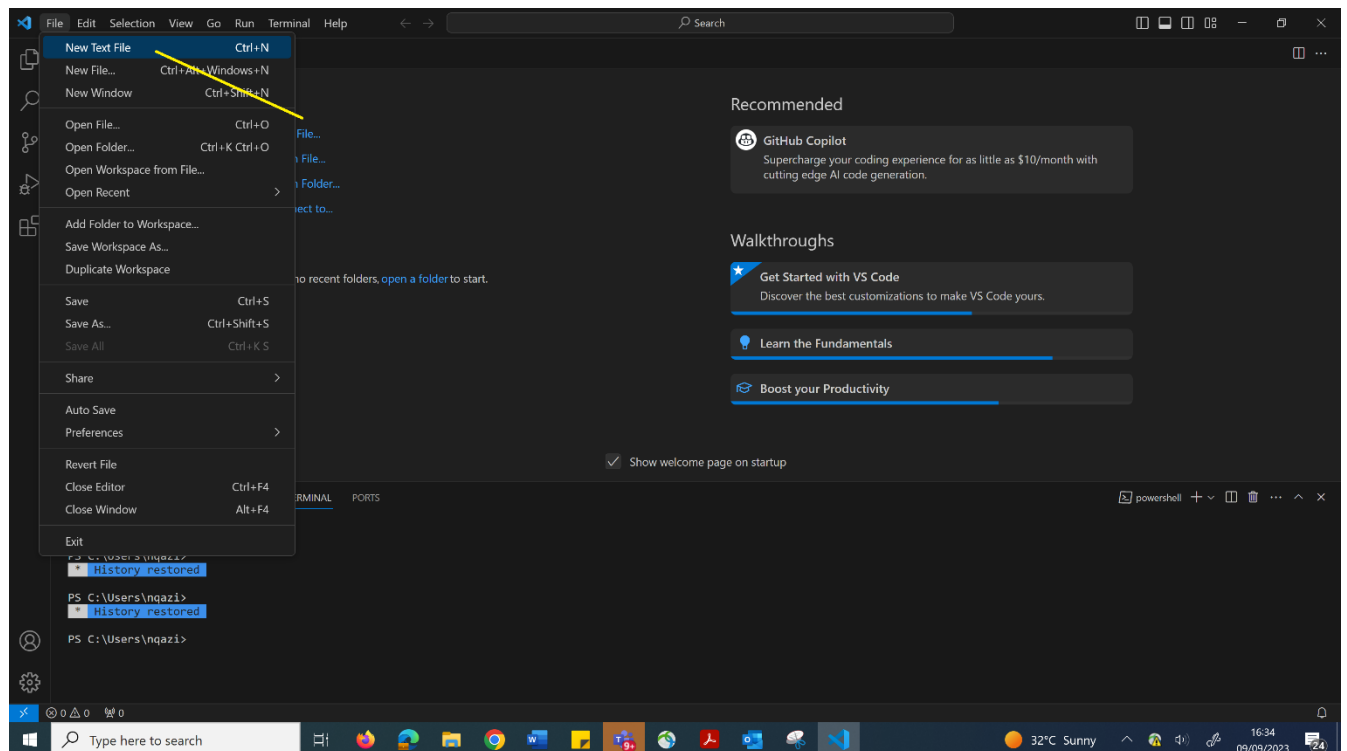

**:node -v**

you should see the version number of the nodeJS running on your system as shown in the figure below, however, you may have a different version of nodeJS running

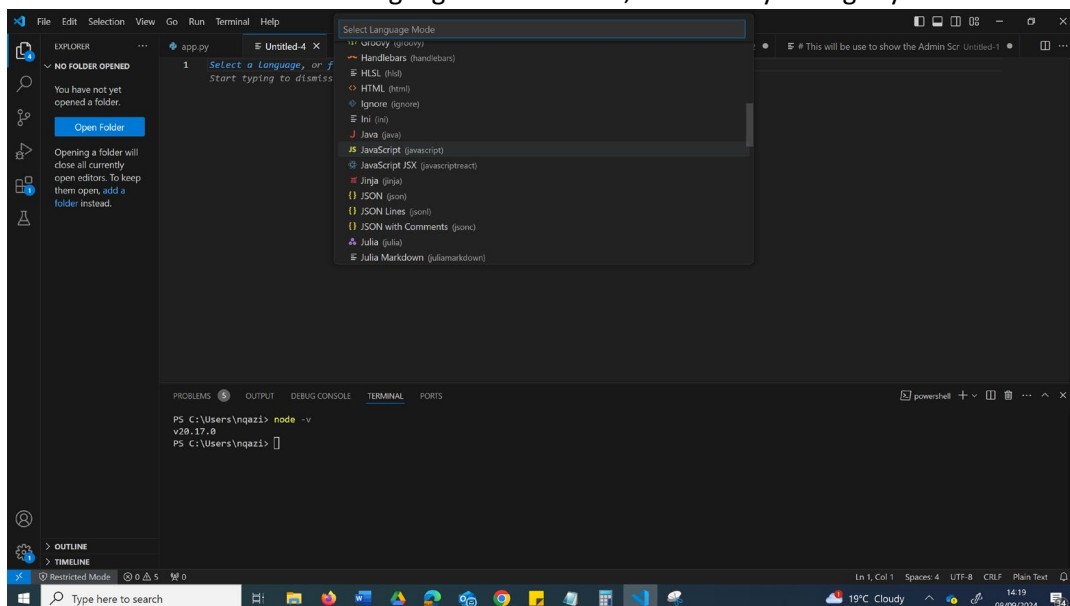

```
PS C:\Users\nqazi> node -v
v20.17.0
PS C:\Users\nqazi> |
```

## How to create a JS file

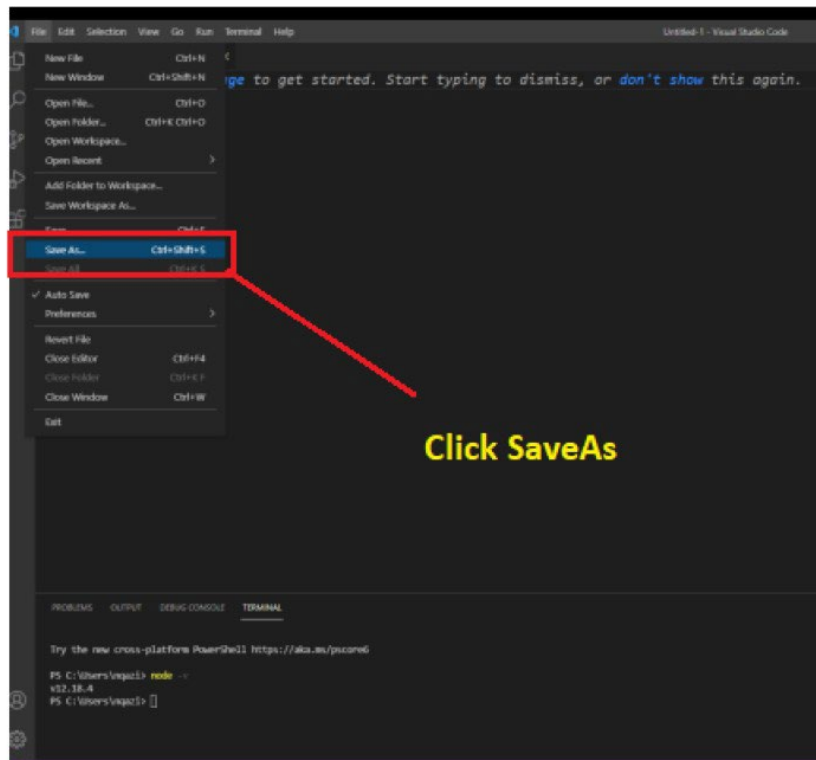

Click New text file

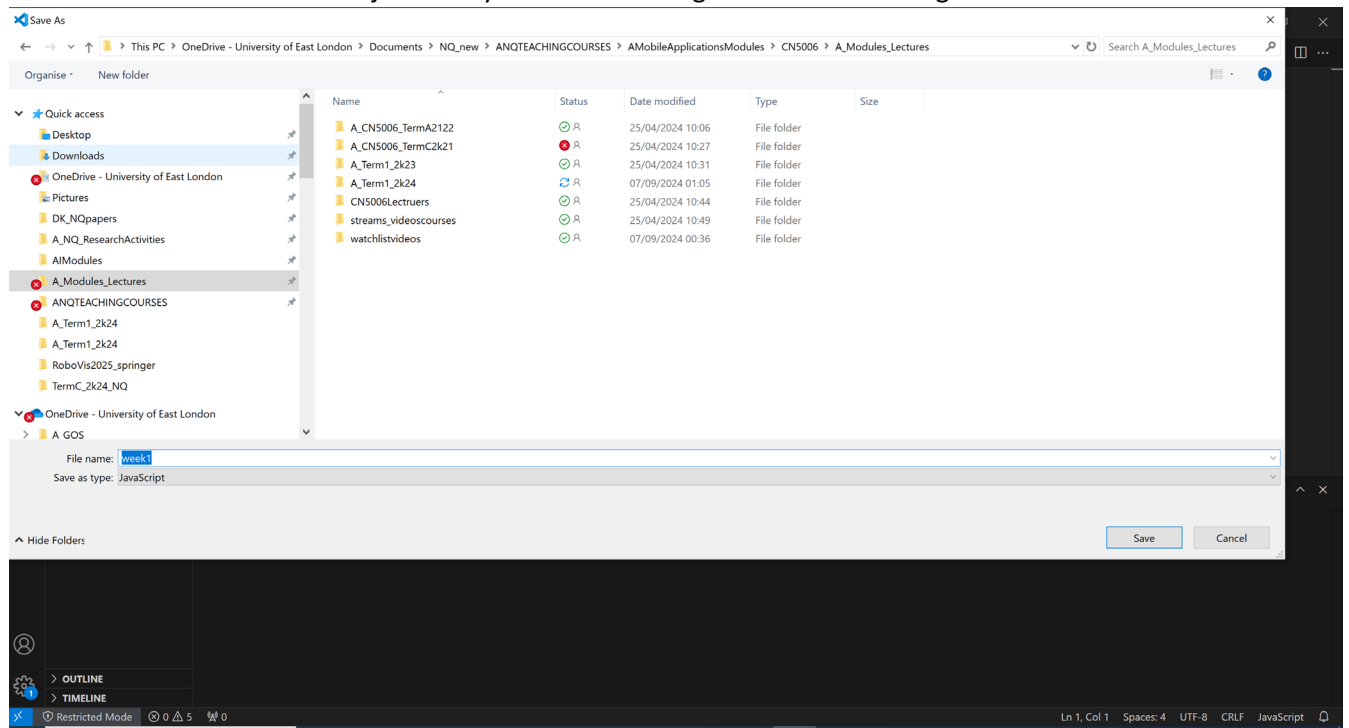

You will see this : Click Select a language and select JS, screen may be slightly different.

It will open a new blank file,. save this file as a Java script file by **clicking SaveAS**

It will open a dialogue box Choose the name of the file of your choice such as **index.js** or **week1.js** which will then create a index.js file for you to start coding . as shown in the figure below

Finally a index.js file is created in your specified folder and you are read to write your first Java script program.

**Writing the code:** Write the code in Javascript in the file (index.js)

**Exercise 1:**

Write down the following line of code in the file

```
console.log("This is my first programe ")  
console.log("Well come John your month salary is 500000")
```

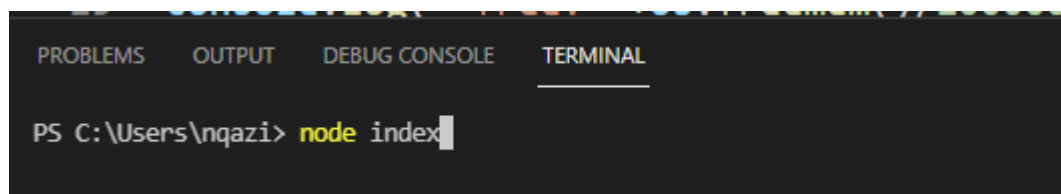

## Check if you are in the right Directory:

Before you run your first program make sure the following:

- Verify your current directory by running the command `pwd`. This will display your current working directory.
- If the your index.js file is saved in another directory, you need to navigate to that directory first.
- For example, if you saved the file `index.js` in the directory `CN5006`, enter the command `cd CN5006` and press Enter to move into that directory.

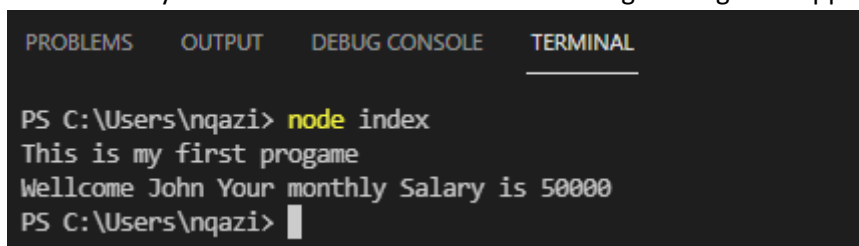

## How to Run the Code:

- Once you're in the correct directory, proceed with the following command. In the terminal window type

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  
  
PS C:\Users\nqazi> node index
```

You will see you code will be executed and following message will appear in the Terminal window.

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  
  
PS C:\Users\nqazi> node index  
This is my first programe  
Wellcome John Your monthly Salary is 50000  
PS C:\Users\nqazi>
```

**Example 2:**

```
const num1 = 5;  
const num2 = 3;  
// add two numbers  
const sum = num1 + num2;  
// display the sum
```

```
console.log('The sum of ' + num1 + ' and ' + num2 + ' is: ' + sum);
```

**Save and Run the code. Take a screenshot of the the terminal window when you run this program and show it in your portfolio**

### Example 2:

Javascript Program to Check if a number is Positive, Negative, or Zero

Write the following program in the index.js

```
// program that checks if the number is positive, negative or zero
// input from the user
const number = parseInt(prompt("Enter a number: "));

// check if number is greater than 0
if (number > 0) {
    console.log("The number is positive");
}

// check if number is 0
else if (number == 0) {
    console.log("The number is zero");
}

// if number is less than 0
else {
    console.log("The number is negative");
}
```

Compile and see the result.

## Portfolio Exercise

- Write a reflection for this week's Lab exercises to include in your portfolio.
- finally, Create a program that can perform addition, subtraction, multiplication, and division of two or more numbers. Include this program in your portfolio for Week 1 and write a reflection for your experience in understanding and writing the Javascript Code.

**• Please remember that your portfolio is due in Week 11 and must be submitted on Moodle, with a total of 15 marks. However, ensure that you have shown your Lab instructor the completed Lab 1 Week exercise beforehand.**
